

CIRCULA

Turning Industrial Waste into Valuable
Resources

SD-04 — Circular Economy Marketplace
Theme – Sustainable Development

Team: Tech Divas

Shreya Singh (0251CSML104)

Nandani Jaiswal (0251CSE256)

Priyanka Gupta (0251CSE305)

Aaliya Fatima(0251CSE350)

*"What is waste for one industry can be a
resource for another."*

The Problem: Industrial Resources Are Disconnecte

✗ Unused Material

850 kg aluminium sits idle — no digital channel to surface it

✗ Manual Discovery

Buyers rely on calls, emails, brokers — slow and unreliable

✗ Trust Uncertainty

No verified provenance, no material history, no confidence

✗ Virgin Material Purchased

Recyclable surplus ignored → new raw material extracted instead

CIRCULA — the missing digital layer connecting industrial surplus with industrial demand.

CIRCULA vs. Traditional Marketplace

Dimension	Traditional Marketplace	CIRCULA
Searching	Manual browsing	AI-powered intelligent matching
Listings	Generic descriptions	AI-classified material specs
Ranking	Price-only sorting	Multi-factor Circular Score ranking
Trust	Self-reported claims	Blockchain-backed provenance
Impact Tracking	No tracking	Real-time carbon & ESG analytics

The Opportunity

India's circular economy is a multi-trillion rupee market — waiting to be unlocked.

1

TAM

India's total industrial waste & scrap market annually

2

SAM

Manufacturers & MSMEs with recyclable surplus — addressable segment

3

SOM

CIRCULA's Year 1-2 realistic capture — 1.5-2% of SAM

Who Uses CIRCULA?

I Have Material

Manufacturers · MSMEs
· Industrial Companies

I Need Material

Manufacturers ·
Recyclers & Processors
· Construction

Enablers

Sustainability / ESG Teams · Platform Administrators

Introducing CIRCULA

THE PRODUCT ECOSYSTEM

AI Material Classification

Identify type, category & characteristics instantly

AI Smart Matching

Connect supply with demand intelligently

Material Passport

Digital identity & provenance tracking

Blockchain-Based Ownership

Tamper-resistant transaction records

Carbon Impact Analytics

Measure real environmental value

Second-Life Recommendations

Discover what materials could become and where they can be used

CIRCULA Match Score: Factor Weights

Every match is scored by a weighted AI algorithm ensuring true circular value — not just lowest price.

Technology Behind CIRCULA

Stack Highlights

- AI classification & NLP-driven requirement understanding
- Smart matching engine with Circular Match Score
- Blockchain smart contracts for ownership transfer
- Carbon & circularity analytics layer

System Stack

Frontend

React

Backend

Node.js + Express

Database

PostgreSQL /
MongoDB

AI/ML

Python +
TensorFlow/PyTorch

Blockchain

Solidity + EVM
Testnet

Infrastructure

AWS/GCP/Azure +
Maps APIs

Business Model

Three distinct revenue streams built for scale.

Transaction Fee

2-3% commission on every successful material exchange between buyers and sellers

Subscription Plans

Enterprise tiers with advanced analytics, carbon reporting & compliance dashboards

Data & Certification

Verified ESG & sustainability reports sold to companies for regulatory compliance

Company B accepts

Reusable material gets a second life. — Illustrative Demo Scenario

From One Exchange to a Circular Network

IMPACT

Material Reused

Waste diverted, impact measured

Virgin Material Replaced

Secondary materials replace raw extraction

Better Utilization

Resources optimized across network

SCALABILITY & FUTURE

Phase 1 — Core Categories

Metals · Plastics · Textiles · Wood · Construction · Packaging

Phase 2 — Network Expansion

MSMEs → Manufacturers → Recycling Ecosystem

Future Scope

- AI quality checks
- IoT inventory integration
- Automated reporting
- Procurement integration

Why CIRCULA?

1

✓ **Innovation**

Not just a listing board — CIRCULA combines AI Classification, Circular Match Score, Material Passport, and Second-Life Recommendations into one intelligent system that finds, verifies, and reimagines waste as reusable value.

2

✓ **Technical Approach**

Layered architecture connecting AI classification, blockchain smart contracts, and analytics — built for real-time matching, not just static listings.

3

✓ **Feasibility**

A realistic MVP built on proven technologies (React, Node.js, TensorFlow, Solidity) — a working prototype end-to-end, not just a concept.

4

✓ **UX**

Simple, intuitive flow for both sellers and buyers — upload, classify, match, and transact in a few clicks, with no technical expertise required.

5

✓ **Impact**

Measurable waste diversion and environmental value — proven through a live demo scenario (850 kg diverted, ~2.1 tons CO₂ saved).

6

✓ **Scalability**

Designed to expand from one material category to a multi-industry, multi-region circular economy network, with IoT and logistics integration on the roadmap.

Validation & Early Signals

→ ✓ Problem Validated

Research & interviews with manufacturers and MSMEs confirm significant unused material surplus and inefficient disposal

→ ✓ Prototype Live

850 kg aluminium scrap successfully matched with a buyer — achieving a **94/100** Circular Match Score

→ ✓ Functional Demo

Not just a concept — a working prototype proving the full matching pipeline end-to-end

Team Tech Divas

B.Tech students passionate about sustainability and AI-driven solutions.

UI/UX Design

Aaliya Fatima

Research, Documentation & Frontend Developer

"A future where industrial waste is never automatically treated as waste."

Discover Resources

Unlock hidden value in industrial waste streams

Build Trust

Blockchain-backed ownership & material provenance

Reduce Waste

Keep materials productive and in circulation longer

Measure Impact

Quantify environmental & economic benefits in real-time
